No part of this manual may be reproduced or transmitted in any form or by any means without prior written consent of Huawei Technologies Co., Ltd. and its affiliates ("Huawei").

The product described in this manual may include copyrighted software of Huawei and possible licensors. Customers shall not in any manner reproduce, distribute, modify, decompile, disassemble, decrypt, extract, reverse engineer, lease, assign, or sublicense the said software, unless such restrictions are prohibited by applicable laws or such actions are approved by respective copyright holders.

Trademarks and Permissions

WER, HUAWER, and WE are trademarks or registered trademarks of Huawei Technologies Co., Ltd. Other trademarks, product, service and company names mentioned may be the property of their respective owners.

Notice

Some features of the product and its accessories described herein rely on the software installed, capacities and settings of local network, and therefore may not be activated or may be limited by local network operators or network service providers.

Thus, the descriptions herein may not exactly match the product or its accessories which you purchase. Huawei reserves the right to change or modify any information or specifications contained in this manual without prior notice and without any liability.

DISCLAIMER

ALL CONTENTS OF THIS MANUAL ARE PROVIDED "AS IS". EXCEPT AS REQUIRED BY APPLICABLE LAWS, NO WARRANTIES OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE MADE IN RELATION TO THE ACCURACY, RELIABILITY OR CONTENTS OF THIS MANUAL.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT SHALL HUAWEI BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, OR LOSS OF PROFITS, BUSINESS, REVENUE, DATA, GOODWILL SAVINGS OR ANTICIPATED SAVINGS REGARDLESS OF WHETHER SUCH LOSSES ARE FORSEEABLE OR NOT.

THE MAXIMUM LIABILITY (THIS LIMITATION SHALL NOT APPLY TO LIABILITY FOR PERSONAL INJURY TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH A LIMITATION) OF HUAWEI ARISING FROM THE USE OF THE PRODUCT DESCRIBED IN THIS MANUAL SHALL BE LIMITED TO THE AMOUNT PAID BY CUSTOMERS FOR THE PURCHASE OF THIS PRODUCT.

Import and Export Regulations

Customers shall comply with all applicable export or import laws and regulations and be responsible to obtain all necessary governmental permits and licenses in order to export, re-export or import the product mentioned in this manual including the software and technical data therein.

Privacy Policy

To better understand how we protect your personal information, please see the privacy policy at http://consumer.huawei.com/privacy-policy.

This document describes the hardware application interfaces and air interfaces provided by HUAWEI MU709 series (MU709s-2 and MU709s-6) HSPA+ LGA module (hereinafter referred to as the MU709 module).

This document helps hardware engineer to understand the interface specifications, electrical features and related product information of the MU709 module.

2 Overall Description

2.1 About This Chapter

This chapter gives a general description of the MU709 module and provides:

- Function Overview
- Circuit Block Diagram
- Application Block Diagram

2.2 Function Overview

| Table 2-1 | Features |
|-----------|----------|
|-----------|----------|

| Feature | Description | | | | |
|--------------------------|--|--|--|--|--|
| Physical Dimensions | Dimensions (L × W × H): 30 mm × 30 mm × 2.27 mm Weight: about 5 g | | | | |
| Operating Bands | MU709s-2: • WCDMA/HSDPA/HSUPA/HSPA+: Band 1, Band 8 • GSM/GPRS/EDGE: 850 MHz/900 MHz/1800 MHz/1900 MHz | | | | |
| | MU709s-6: • WCDMA/HSDPA/HSUPA/HSPA+: Band 1, Band 2, Band 5 • GSM/GPRS/EDGE: 850 MHz/900 MHz/1800 MHz/1900 MHz | | | | |
| Operating Temperature | Normal operating temperature: –20°C to +70°C Extended operating temperature ^[1] : –40°C to +85°C | | | | |
| Storage Temperature | -40°C to +85°C | | | | |
| Humidity | RH5% to RH95% | | | | |
| Power Voltage | DC 3.3 V to 4.2 V (typical value is 3.8 V) | | | | |

| Feature | Description |
|--|--|
| AT Commands | See the HUAWEI MU709 Series HSPA+ Module AT Command Interface Specification. |
| Application Interface (145-pin LGA interface) | One standard USIM (Class B and Class C) interface Audio interface: PCM interface USB 2.0 (High Speed) UART interface: • 8-wire UART0 x 1, up to 920 kbit/s • 2-wire UART1 x 1 (This is only used for debugging) GPIO LED x 1 Power on/off interface Hardware reset interface JTAG interface SLEEP_STATUS WAKEUP_IN WAKEUP_OUT |
| Antenna Interface | WWAN MAIN antenna pad x1 WWAN AUX antenna pad x 1 |
| SMS | New message alert Management of SMS: read SMS, write SMS, send SMS, delete SMS and list SMS Supports MO and MT: Point-to-point |
| Data Services | GPRS: UL 85.6 kbit/s; DL 85.6 kbit/s EDGE: UL 236.8 kbit/s; DL 236.8 kbit/s WCDMA PS: UL 384 kbit/s; DL 384 kbit/s HSPA+: UL 5.76 Mbit/s; DL 21.6 Mbit/s |

[1]: When the MU709 module work in the range from -40° C to -20° C or $+70^{\circ}$ C to $+85^{\circ}$ C, **NOT** all their RF performances comply with 3GPP specifications.

2.3 Circuit Block Diagram

Figure 2-1 shows the circuit block diagram of the MU709 module. The major functional units of the MU709 module contain the following parts:

- Power management
- Baseband controller
- Nand flash
- RF Circuit

Figure 2-1 Circuit block diagram of the MU709 module

2.4 Application Block Diagram

Figure 2-2 Application block diagram of the MU709 module

| UART Interface: | The module supports 2 UART interfaces. One is 8-wire UART0, and the other is 2-wire UART1 (only for debugging). |
|---------------------------|---|
| USB Interface: | The USB interface supports USB 2.0 high speed standard. |
| USIM Interface: | The USIM interface provides the interface for a USIM card. |
| External Power Supply: | DC 3.8 V is recommended. |
| Audio Interface: | The module supports one PCM interface. |
| LED: | Indicates the work status. |
| RF Pad: | RF antenna interface. |

3 Description of the Application Interfaces

3.1 About This Chapter

This chapter mainly describes the external application interfaces of the MU709 module, including:

- LGA Interface
- Power Interface
- Signal Control Interface
- UART Interface
- USB Interface
- USIM Card Interface
- Audio Interface
- General Purpose I/O Interface
- JTAG Interface
- RF Antenna Interface
- Reserved Interface
- NC Interface
- Test Points Design

3.2 LGA Interface

The MU709 module uses the 145-pin LGA as their external interface. For details about the module and dimensions, see 6.4 Dimensions and Interfaces .

Figure 3-1 shows the sequence of pins on the 145-pin signal interface of the MU709 module.

Figure 3-1 Sequence of LGA interface (Top view)

Table 3-1 shows the definitions of pins on the 145-pin signal interface of the MU709 module.

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) | Comments |
|------------|---------------|-------------|---|-----------------|-------------|-------------|-------------|--|
| 1 U | UART1_TX | 0 | UART1 transmit output | V _{OH} | 1.35 | 1.8 | 2.1 | - |
| | | | for debugging. | V _{OL} | 0 | - | 0.45 | - |
| 2 | NC | - | Not connected | - | - | - | - | - |
| 3 | NC | - | Not connected | - | - | - | - | - |
| 4 | UART1_RX | I | UART1 receive data input | V _{IH} | 1.26 | 1.8 | 2.1 | - |
| | | | for debugging. | VIL | -0.3 | - | 0.63 | - |
| 5 | PCM_SYNC | 0 | PCM sync | V _{OH} | 1.35 | 1.8 | 2.1 | The pin is output |
| | | | | Vol | 0 | - | 0.45 | when the module is used as PCM master; input when the module is used as PCM slave. |
| 6 | PCM_DIN | I | PCM data in | VIH | 1.26 | 1.8 | 2.1 | - |
| | | | | VIL | -0.3 | - | 0.63 | |
| 7 | PCM_DOUT | 0 | PCM data out | V _{OH} | 1.35 | 1.8 | 2.1 | - |
| | | | | V _{OL} | 0 | - | 0.45 | |
| 8 | PCM_CLK | 0 | PCM clock | V _{OH} | 1.35 | 1.8 | 2.1 | The pin is output when the module is used as PCM master; input when the module is used as PCM slave. |
| | | | | V _{OL} | 0 | - | 0.45 | |
| 9 | SD_DATA1 | I/O | SD Card data signal. | V _{OH} | 2.25 | 3.0 | 3.3 | - |
| | | | Only used for debugging. Please reserve this pin as the test point. | V _{OL} | 0 | - | 0.75 | - |
| | | | | V _{IH} | 2.1 | 3.0 | 3.3 | |
| | | | | VIL | -0.3 | - | 1.05 | |
| 10 | SD_DATA2 | I/O | SD Card data signal. | V _{OH} | 2.25 | 3.0 | 3.3 | - |
| | | | Only used for debugging. | V _{OL} | 0 | - | 0.75 | |
| | | | Please reserve this pin as the test point. | VIH | 2.1 | 3.0 | 3.3 | |
| | | | | V _{IL} | -0.3 | - | 1.05 | |
| 11 | WAKEUP_I N | I | Sleep authorization signal. H: Sleep mode is | V _{IH} | 1.26 | 1.8 | 2.1 | - |

Table 3-1 Definitions of pins on the LGA interface

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) | Comments |
|------------|------------------|-------------|--|-----------------|-------------|-------------|-------------|--|
| | | | disabled. L: Sleep mode is enabled (default value). | ViL | -0.3 | - | 0.63 | The signal is internally pulled down. The module will be waked up when it is externally pulled up. |
| 12 | VBAT | PI | Power supply input. The rising time of VBAT must be greater than 100 us | - | 3.3 | 3.8 | 4.2 | - |
| 13 | VBAT | PI | Power supply input The rising time of VBAT must be greater than 100 us | - | 3.3 | 3.8 | 4.2 | - |

- I indicates pins for digital signal input; O indicates pins for digital signal output; PI indicates power input pins; PO indicates power output pins.
- V_{IL} indicates low-level input voltage; V_{IH} indicates high-level input voltage; V_{oL} indicates low-level output voltage; V_{oH} indicates high-level output voltage.
- The NC (Not Connected) pins are floating and there are no signal connected to these pins.
- The **Reserved** pins are internally connected to the module. Therefore, these pins should not be used, otherwise they may cause problems. Please contact us for more details about this information.

3.3 Power Interface

3.3.1 Overview

The power supply part of the MU709 module contains:

- VBAT pins for the power supply
- VCC_EXT1 pin for external power output with 1.8 V
- USIM_VCC pin for USIM card power output
- SD_VCC pin for SD card power output for debugging.

Table 3-2 lists the definitions of the pins on the power supply interface.

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) | Comments |
|--|--------------|-------------|--|-----------|-------------|-------------|-------------|--------------------|
| 12 and 13 | VBAT | PI | Power supply input. The rising time of VBAT must be greater than 100 us | - | 3.3 | 3.8 | 4.2 | |
| 48, 50, 52, 54, 56, 58, 59, 106, 108, 110, 112, 114 and 116 | GND | - | GND | - | - | - | - | - |

| 34 | VCC | FU | USIM card | | -0.3 | 3.0 | 3.3 | USIM_VCC =3.0 V |
| 92 | SD_VC C | PO | SD Card Power. Only used for debugging. Please reserve the test point. | - | 2.9 | 3.0 | 3.1 | |
| 121–145 | GND | - | Thermal Ground Pad | - | - | - | - | - |

Table 3-2 Definitions of the pins on the power supply interface

3.3.2 Power Supply VBAT Interface

When the MU709 module works normally, power is supplied through the VBAT pins and the voltage ranges from 3.3 V to 4.2 V (typical value: 3.8 V). The 145-pin LGA provides two VBAT pins and some GND pins for external power input. To ensure that the MU709 module works normally, all the pins must be used efficiently.

When the MU709 module is used for different external applications, pay special attention to the design for the power supply. When the MU709 module works at 2G mode and transmits signals at the maximum power, the transient current may reach the transient peak value of about 2.75 A due to the differences in actual network environments. In this case, the VBAT voltage drops. If you want wireless good performance, please make sure that the voltage does not decrease below 3.3 V in any case. Otherwise, exceptions such as restart of the MU709 module may occur.

A low-dropout (LDO) regulator or switch power with current output of more than 3 A is recommended for external power supply. Furthermore, five 220 μ F or above energy storage capacitors are connected in parallel at the power interface of the MU709

module. In addition, to reduce the impact of channel impedance on voltage drop, you are recommended to try to shorten the power supply circuit of the VBAT interface.

It is recommended that customers add the EMI ferrite bead (FBMJ1608HS280NT manufactured by TAIYO YUDEN or MPZ1608S300ATAH0 manufactured by TDK is recommended) to directly isolate DTE from DCE in the power circuit. Figure 3-2 shows the recommended power circuit of MU709 module.

When the system power restarts, a discharge circuit is recommended to make sure the power voltage drops below 1.80 V for 1s at least.

The rising time of VBAT should be 100 µs at least. Otherwise, the module will be powered off.

3.3.3 Output Power Supply Interface

Output power supply interface is VCC_EXT1, USIM_VCC and SD_VCC.

Through VCC_EXT1, the module can supply 1.8 V power externally with an output current of 10 mA (typical value) for external level conversion or other applications. If the module is in sleep mode, the output power supply interface is in the low power consumption state (< 500 μ A). If the module is in power down mode, the output power supply is in the disabled state.

Through the USIM_VCC power supply interface, the module can supply 1.8 V or 3 V power to the USIM card.

The SD_VCC is SD card power that only used for debugging. Please reserve the test point.

3.4 Signal Control Interface

3.4.1 Overview

The signal control part of the interface on the MU709 module consists of the following:

- Power on/off (POWER_ON_OFF) pin
- System reset (RESIN_N) pin
- WAKEUP_IN signal (WAKEUP_IN) pin
- WAKEUP_OUT signal (WAKEUP_OUT) pin

- SLEEP_STATUS signal (SLEEP_STATUS) pin
- LED signal (LED_MODE) pin

Table 3-3 lists the pins on the signal control interface.

| Table 3-3 | Definitions of the | pins on the signal | control interface |
|-----------|--------------------|------------------------|-------------------|
| | | Find the second second | |

| | | | Current sink | | | | | | |
| | | | Drive strength: 10 mA | | | | | | |

3.4.2 **Power-on/off Pin**

The MU709 module can be controlled to power on/off by the POWER_ON_OFF pin.

Table 3-4 Two states of POWER_ON_OFF

| Item | Pin state | Description |
|------|--|--|
| 1 | Low (when MU709 module is in power off state.) | MU709 module is powered on. POWER_ON_OFF pin should be pulled down for 1.0s at least. |
| 2 | Low (when MU709 module is in power on state.) | MU709 module is powered off. POWER_ON_OFF pin should be pulled down for 4.0s at least. |

Figure 3-3 Connections of the POWER_ON_OFF pin

Power-On Time Sequence

After VBAT has been applied and is stable, the POWER_ON_OFF signal is pulled down, and then the module will boot up.

During power on timing, please make sure the VBAT is stable.

Figure 3-4 Power on timing sequence

| Parameter | Comments | Time (Nominal values) | Units |
|------------------|--------------------------------------|-----------------------|-------|
| T _{PON} | POWER_ON_OFF turn on time. | > 1.0 | S |
| T _{PD+} | POWER_ON_OFF Valid to USB D+ high | About 7.0 | S |

 Table 3-5
 Power on timing

If the DTE needs to detect the PID/VID of module during the BIOS phase, the detection time should exceed the $T_{\text{PD+}}$ time.

Power-Off Time Sequence

Figure 3-5 Power off timing sequence

Table 3-6 Power off timing

| Parameter | Comments | Time (Nominal values) | Units |
|-------------------|----------------------------------|-----------------------|-------|
| T _{POFF} | POWER_ON_OFF turn off time. | > 4.0 | S |
| T _{PD+} | POWER_ON_OFF Valid to USB D+ low | > 4.0 | S |

3.4.3 **RESIN_N**

The RESIN_N pin is used to reset the module's system. When the software stops responding, the RESIN_N pin can be pulled down to reset the hardware.

Figure 3-6 Connections of the RESIN_N pin

As the RESIN_N and POWER_ON_OFF signals are relatively sensitive, it is recommended that you install a 10 nF–0.1 μ F capacitor near the RESIN_N and POWER_ON_OFF pins of the interface for filtering. In addition, when you design a circuit on the PCB of the interface board, it is recommended that the circuit length not exceed 20 mm and that the circuit be kept at a distance of 2.54 mm (100 mil) at least from the PCB edge. Furthermore, you need to wrap the area adjacent to the signal wire with a ground wire. Otherwise, the module may be reset due to interference.

The MU709 module supports hardware reset function. If the software of the MU709 module stops responding, you can reset the hardware through the RESIN_N signal as shown in Figure 3-7 .When a low-level pulse is supplied through the RESIN_N pin, the hardware will be reset. After the hardware is reset, the software starts powering on the module and reports relevant information according to the actual settings. For example, the AT command automatically reports ^SYSSTART.

Figure 3-7 Reset pulse timing

The RESIN_N pin must not be pulled down for more than 1s. Otherwise, the module will be powered off.

3.4.4 WAKEUP_IN Signal

WAKEUP_IN pin is the authorization signal of MU709 entering sleep mode. It is internally pulled down, so it can be floating if not used.

Table 3-3 shows the definition of the WAKEUP_IN signal.

The module cannot enter sleep mode when this pin is pulled up (1.8 V), and the module should be waked up when the pin is pulled up for 1s.

Figure 3-8 Connections of the WAKEUP_IN pin

3.4.5 WAKEUP_OUT Signal

The WAKEUP_OUT signal is used to wake up the external devices. Table 3-3 shows the definition of the WAKEUP_OUT signal.

Figure 3-9 shows recommended circuit of the WAKEUP_OUT pin.

3.4.6 SLEEP_STATUS Signal

SLEEP_STATUS signal is used to indicate the sleep status of MU709 module. The external devices can get to know whether the module is in sleep mode by reading SLEEP_STATUS pin.

When SLEEP_STATUS pin is in high level, MU709 module is in wakeup state.

When SLEEP_STATUS pin is in low level, MU709 module is in sleep state.

Figure 3-10 shows recommended circuit of the SLEEP_STATUS pin.

3.4.7 LED_MODE Signal

MU709 module provides an LED_MODE signal to indicate the work status.

| Table 3-7 | State of the | LED_ | _MODE | pin |
|-----------|--------------|------|-------|-----|
|-----------|--------------|------|-------|-----|

| No. | Operating Status | LED_MODE |
|-----|-------------------------------|---|
| 1 | No service/Restricted service | Outputs: low (0.1s)-high (0.1s)-low (0.1s)-high (1.7s) |
| | | 25 Cycle |
| 2 | Register to the network | Outputs: low (0.1s)-high (1.9s) 2s cycle |
| 3 | Dial-up successfully | Outputs: low |

Figure 3-11 shows the recommended circuits of the LED_MODE pin. According to LED feature, you can adjust the LED brightness by adjusting the resistance of resistor R. The mode indicator (LED_MODE) is current sink. Drive strength: 10 mA.

Figure 3-11 Driving circuit

3.5 UART Interface

3.5.1 Overview

The MU709 module provides the UART0 (8-wire UART) interface for one asynchronous communication channel. As the UART0 interface supports signal control through standard modem handshake, AT commands are entered and serial communication is performed through the UART0 interface. The UART have the following features:

- Full-duplex
- 7-bit or 8-bit data
- 1-bit or 2-bit stop bit
- Odd parity check, even parity check, or non-check
- Baud rate clock generated by the system clock
- Direct memory access (DMA) transmission
- Supported baud rate: 9600 bit/s, 19200 bit/s, 38400 bit/s, 57600 bit/s, 115200 bit/s (default), 230400 bit/s, 460800 bit/s and 921600 bit/s

The 2-wire UART1 is for debugging only. Customers should layout two test points, which are required for system troubleshooting and analysis.

Table 3-8 lists the UART interface signals.

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) |
|------------|----------|-------------|------------------------------|-----------------|-------------|-------------|-------------|
| 1 | UART1_TX | 0 | UART1 transmit output for | V _{OH} | 1.35 | 1.8 | 2.1 |

3.5.2 Circuit Recommended for the UART Interface

Figure 3-12 Connection of the UART interface in the MU709 module (DCE) with the host (DTE)

The RS-232 chip (must support 921600 bit/s) can be used to connect the MU709 module with UART0. In this connection, the Complementary Metal Oxide Semiconductor (CMOS) logic level and the Electronic Industries Association (EIA) level are converted mutually.

- The UART0 cannot wake up the module from the sleep status, and you can pull up the WAKE_IN signal for 1s instead.
- The level of RS-232 transceivers must match that of the MU709 module.

3.6 USB Interface

The MU709 module is compliant with USB 2.0 high speed protocol. The USB interface is powered directly from the VBAT supply. The USB signal lines are compatible with the USB 2.0 signal specifications. Figure 3-13 shows the circuit of the USB interface.

Table 3-9 Definition of the USB interface

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min.(V) | Typ.(V) | Max.(V) |
|------------|----------|-------------|--|-----------|-------------|-------------|-------------|
| 85 | USB_DM | I/O | USB Data- defined in the USB 2.0 Specification | - | - | - | - |
| 86 | USB_DP | I/O | USB Data+ defined in the USB 2.0 Specification | - | - | - | - |

According to USB protocol, for bus timing or electrical characteristics of MU709 USB signal, please refer to the chapter 7.3.2 of *Universal Serial Bus Specification 2.0*.

Figure 3-13 Recommended circuit of USB interface

- USB_DM and USB_DP are required to control the differential impedance 90 Ω (±10%).
- The length of the gap between USB_DM and USB_DP should not exceed 5 mil.
- The USB differential signal trace must be as short as possible, and laid out away from high-speed clock signals and other periodic signals as far as possible.
- Minimize through-holes and turning angles on the USB signal trace to reduce signal reflection and impedance change.
- Do not route the USB signal trace under the following components: crystal, oscillator, clock circuit, electromagnetic component, and IC that uses or generates clocks.
- Avoid stubs on the USB signal trace because stubs generate reflection and affect the signal quality.
- Route the USB signal trace on a complete reference plane (GND) and avoid crossing inter-board gaps because inter-board gaps cause a large reflow channel area and increase inductance and radiation. In addition, avoid signal traces on different layers.
- The USB signal trace must be far away from core logical components because the high current pulse generated during the state transitions process of core components may impose interference on signals.
- The USB signal trace must be far away from board edges with a minimum distance of 20 × h (h indicates the vertical distance between the trace and the reference layer) to avoid signal radiation.
- C1 and C2 are ready for dealing with filter differential mode interference and C3 is ready for dealing with filter common mode interference. You can choose the value of the C1, C2 and C3 according to the actual PCB which is integrated 30 mm × 30 mm LGA module

3.7 USIM Card Interface

3.7.1 Overview

The MU709 module provides a USIM card interface complying with the ISO 7816-3 standard and support both Class B and Class C USIM cards.

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min.(V) | Typ. (V) | Max.(V) | Comments |
|------------|----------------|-------------|----------------------|-----------------|--------------------|-------------|-----------------------|--------------------------------|
| 88 | USIM_RE SET | 0 | USIM card reset | V _{OH} | 0.7 x USIM_VCC | - | 3.3 | USIM_VC |
| | | | | V _{OL} | 0 | - | 0.2 x USIM_ VCC | C=1.8 V or 3.0 V |
| 89 | USIM_DA TA | //DA | /O USIM card data | V _{OH} | 0.7 x USIM_VCC | - | 3.3 | |
| | | | | V _{OL} | 0 | - | 0.2 x USIM_ VCC | USIM_VC C=1.8 V or 3.0 V |
| | | | | V _{IH} | 0.65 x USIM_VCC | - | 3.30 | |

Table 3-10 USIM card interface signals

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min.(V) | Typ. (V) | Max.(V) | Comments | | |

3.7.2 Circuit Recommended for the USIM Card Interface

As the MU709 module is not equipped with a USIM socket, you need to place a USIM socket on the user interface board. Figure 3-14 shows the circuit of the USIM card interface.

Figure 3-14 Circuit of the USIM card interface

- Pin 1: USIM_VCC
- Pin 2: USIM_RESET
- Pin 3: USIM_CLK
- Pin 5: GND
- Pin 6: VPP(Programming Voltage)
- Pin 7: USIM_DATA
- Pin 9: USIM_DET

Figure 3-16 Connections of the USIM_DET pin

CD is a pin detecting USIM card in the USIM socket.

• If the USIM card is present, USIM_DET pin should be high, and the CD is open.

• If the USIM card is absent, USIM_DET pin should be low, and the CD is connected to ground.

- To meet the requirements of 3GPP TS 51.010-1 protocols and electromagnetic compatibility (EMC) authentication, the USIM socket should be placed near the LGA interface (it is recommended that the PCB circuit connects the LGA interface and the USIM socket does not exceed 100 mm), because a long circuit may lead to wave distortion, thus affecting signal quality.
- It is recommended that you wrap the area adjacent to the USIM_CLK and USIM_DATA signal wires with ground. The Ground pin of the USIM socket and the Ground pin of the USIM card must be well connected to the power Ground pin supplying power to the MU709 module.
- A 100 nF capacitor and 1 µF capacitor are placed between the USIM_VCC and GND pins in a parallel manner (If USIM_VCC circuit is too long, that the larger capacitance such as 4.7 µF can be employed if necessary). Three 33 pF capacitors are placed between the USIM_DATA and Ground pins, the USIM_RESET and Ground pins, and the USIM_CLK and Ground pins in parallel to filter interference from RF signals.
- It is recommended to take electrostatic discharge (ESD) protection measures near the USIM socket. The TVS diode with Vrwm of 5 V and junction capacitance less than 10 pF must be placed as close as possible to the USIM socket, and the Ground pin of the ESD protection component is well connected to the power Ground pin that supplies power to the MU709 module.
- It is recommended to place a 1 kΩ resistor in series on the USIM_DET interface for ESD protection if USIM_DET is used.

3.8 Audio Interface

MU709 module provides one PCM digital audio interface. Table 3-11 lists the signals on the digital audio interface.

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) | Comments |
|------------|----------|-------------|--------------|-----------------|-------------|-------------|-------------|--|
| 5 | PCM_SYNC | 0 | PCM sync | V _{OH} | 1.35 | 1.80 | 2.10 | The pin is output when the |
| | | | | Vol | 0 | - | 0.45 | module is used as PCM master; input when the module is used as PCM slave. |
| 6 | PCM_DIN | I | PCM data in | VIH | 1.26 | 1.80 | 2.10 | - |
| | | | | VIL | -0.30 | - | 0.63 | |
| 7 | PCM_DOUT | 0 | PCM data out | V _{OH} | 1.35 | 1.80 | 2.10 | - |

Table 3-11 Signals on the digital audio interface

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) | Comments |
|------------|----------|-------------|-------------|-----------------|-------------|-------------|-------------|--|
| | | | | V _{OL} | 0 | - | 0.45 | |
| 8 | PCM_CLK | 0 | PCM clock | V _{OH} | 1.35 | 1.80 | 2.10 | The pin is output when the |
| | | | | Vol | 0 | - | 0.45 | module is used as PCM master; input when the module is used as PCM slave. |

The MU709 PCM interface enables communication with an external codec to support linear format.

Figure 3-17 Circuit diagram of the interface of the PCM (MU709 is used as PCM master)

Figure 3-18 Circuit diagram of the interface of the PCM (MU709 is used as PCM slave)

- It is recommended that a TVS be used on the related interface, to prevent electrostatic discharge and protect IC (Integrated Circuit) components.
- The signal level of CODEC must match that of the module.

3.9 General Purpose I/O Interface

The MU709 module provides GPIO pins for customers to use controlling signals which are worked at 1.8 V CMOS logic levels. Customers can use AT command to control the state of logic levels of 5 GPIO output signal. See the *HUAWEI MU709 Series HSPA+ Module AT Command Interface Specification*.

 Table 3-12
 Signals on the GPIO interface

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) | Comments | |
|-------------|-----------------------------|-------------|--|-----------------|-----------------|-------------|-------------|---|---|
| 55 | GPIO5/USIM | I/O | General Purpose I/O | V _{OH} | 1.35 | 1.8 | 2.1 | The function of | |

| | | | | | V _{OL} | 0 | - | 0.45 | Jamming-detecti on, while the Jamming-detecti |
| | | | | V _{IH} | 1.26 | 1.8 | 2.1 | on should be enabled by AT command. | |
| | | | | VIL | -0.3 | - | 0.63 | | |
| 51, | GPIO | I/O | General Purpose I/O | V _{OH} | 1.35 | 1.8 | 2.1 | The function of | |
| 105, 109 | | | pins. | V _{OL} | 0 | - | 0.45 | these pins has not been | |
| | | | | VIH | 1.26 | 1.8 | 2.1 | defined. | |
| | | | | V _{IL} | -0.3 | - | 0.63 | | |

3.10 JTAG Interface

The MU709 module provides Joint Test Action Group (JTAG) interface. Table 3-13 shows the signals on the JTAG interface. It is recommended that route out the 5 pins as test points on the DTE for tracing and debugging.

Table 3-13 Signals on the JTAG interface

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min.(V) | Typ.(V) | Max.(V) |
|------------|-------------|-------------|-----------------------|-----------------|---------|---------|---------|
| 30 | JTAG_TMS | I | JTAG test mode select | VIH | 1.26 | 1.8 | 2.1 |
| | | | | VIL | -0.3 | - | 0.63 |
| 36 | JTAG_TRST_N | I | JTAG reset | V _{IH} | 1.26 | 1.8 | 2.1 |
| | | | | VIL | -0.3 | - | 0.63 |
| 42 | JTAG_TCK | I | JTAG clock input | VIH | 1.26 | 1.8 | 2.1 |
| | | | | V _{IL} | -0.3 | - | 0.63 |
| 72 | JTAG_TDO | 0 | JTAG test data output | V _{OH} | 1.35 | 1.8 | 2.1 |
| | | | | V _{OL} | 0 | - | 0.45 |
| 87 | JTAG_TDI | 1 | JTAG test data input | V _{IH} | 1.26 | 1.8 | 2.1 |
| | | | | VIL | -0.3 | - | 0.63 |

3.11 RF Antenna Interface

The MU709 module provides two antenna pads (MAIN_ANT and AUX_ANT) for connecting the external antennas.

 Table 3-14
 Definition of the antenna pads

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) |
|------------|----------|-------------|---------------------|-----------|-------------|-------------|-------------|
| 107 | MAIN_ANT | - | RF MAIN antenna pad | - | - | - | - |
| 115 | AUX_ANT | - | RF AUX antenna pad | - | - | - | - |

Route the antenna pad as close as possible to antenna connector. In addition, the impedance of RF signal traces must be 50 $\Omega.$

Figure 3-19 RF signal trace design about MAIN_ANT for reference (the same for AUX_ANT)

Figure 3-20 RF signal layout design about MAIN_ANT for reference (the same for AUX_ANT)

For the PCB designed by the user, the impedance of all the RF signal tracks must be 50 Ω . Generally, the impedance depends on the medium factor, track width, and distance from the floor.

In order to reflect the rules of design, the following figures indicate the complete structure of the microstrip and stripline with an impedance of 50 Ω as well as the reference design for stack.

Figure 3-21 Complete structure of the microstrip

Figure 3-22 Complete structure of the stripline

Figure 3-23 Pad for the RF interface

Figure 3-24 RF Pad design for MU709

Please use impedance simulation tool to calculate RF MAIN pad impedance. The RF MAIN pad dimension of the module is 1.1 mm (L) x 0.9 mm (W). You can get the impedance with lower than 50 Ω calculated by the impedance simulation tool. Since the target impedance is 50 Ω for RF trace, the recommended solution is that to carve out the copper area of the second layer that projected by the RF MAIN pad at top layer. How many layers should be carved out depend on the PCB permittivity, track width, and distance from the floor of your own PCB. Our target is to make the RF MAIN pad impedance as closer to 50 Ω as possible.

3.12 Reserved Interface

The module provides some reserved pins. All reserved pins cannot be used by the customer. **All of them should be Not Connected**.

Table 3-15 Reserved pin

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) |
|--|----------|-------------|--------------------------------------|-----------|-------------|-------------|-------------|
| 28, 29, 31, 35, 43–46, 60–65, 91, 102 and 104 | Reserved | - | Reserved, please keep this pin open. | - | - | - | - |

3.13 NC Interface

The module has some NC pins. There is no signal connected to these pins.

Table 3-16 NC pin

| Pin No. | Pin Name | Pad Type | Description | Parameter | Min. (V) | Typ. (V) | Max. (V) |
|---|----------|----------|---------------|-----------|-------------|-------------|-------------|
| 2, 3, 16–27, 33, 37–41, 47, 82–84, 93–99, 103, 111, 117–120 | NC | - | Not connected | - | - | - | - |

3.14 Test Points Design

In the process of debugging when the module is embedded into the integrated equipment, test points play an important role. Some problems related to the module can be quickly resolved when test points are properly designed.

- 1. The test points below must be designed in the customer board:
- JTAG test points: it is the most common method of debugging.
- USB test points: USB is the most important communication channel between module and AP (host). Not only test points should be placed, but also a 0 ohm series resistor should be placed on USB_D+/USB_D- signal. The resistor can be welded off when necessary, then the USB of module is cut off from AP and can be connected to PC to do some analyses.
- POWER_ON_OFF, RESIN_N: they are some of the most important signals, test points should be placed.
- UART1: UART1 is used for printing the log information.
- SD signals: SD signals are used for debugging.
- VBAT: not only test points should be placed, but also a series magnetic bead should be placed on VBAT signal. The magnetic bead can be welded off when necessary, then the power of module is cut off from customer board and can be connected to external power to do analyses about problems related to power interference.
- VCC_EXT1: to judge whether the module is powered on or not, just test the VCC_EXT1.
- PS_HOLD: the pin is only used for debugging, please reserve this pin as the test point.
- 2. The test points below should be placed according to the requirement in the customer board: SLEEP_STATUS, GPIO, PCM, USIM, UART1, WAKEUP_IN and WAKEUP_OUT, except the two cases below:
 - The corresponding signal is not used.
 - The corresponding signal is used, but there is already another place where this signal can be tested, such as SIM socket pin.

RF Specifications

4.1 About This Chapter

This chapter describes the RF specifications of the MU709 module, including:

- **Operating Frequencies** •
- Conducted RF Measurement
- Conducted Rx Sensitivity and Tx Power
- Antenna Design Requirements

4.2 Operating Frequencies

Table 4-1 and Table 4-2 show the RF bands supported by MU709 module.

| Operating Band | Тх | Rx |
|----------------|-------------------|-------------------|
| UMTS Band 1 | 1920 MHz–1980 MHz | 2110 MHz–2170 MHz |
| UMTS Band 8 | 880 MHz–915 MHz | 925 MHz–960 MHz |
| GSM 850 | 824 MHz–849 MHz | 869 MHz–894 MHz |
| GSM 900 | 880 MHz–915 MHz | 925 MHz–960 MHz |
| GSM 1800 | 1710 MHz–1785 MHz | 1805 MHz–1880 MHz |
| GSM 1900 | 1850 MHz–1910 MHz | 1930 MHz–1990 MHz |

| | Table 4-2 | RF | bands | of | MU7 | '09s- | 6 |
|--|-----------|----|-------|----|-----|-------|---|
|--|-----------|----|-------|----|-----|-------|---|

| Operating Band | Тх | Rx |
|----------------|-------------------|-------------------|
| UMTS Band 1 | 1920 MHz–1980 MHz | 2110 MHz–2170 MHz |
| UMTS Band 2 | 1850 MHz–1910 MHz | 1930 MHz–1990 MHz |

| Operating Band | Тх | Rx |
|----------------|-------------------|-------------------|
| UMTS Band 5 | 824 MHz–849 MHz | 869 MHz–894 MHz |
| GSM 850 | 824 MHz–849 MHz | 869 MHz–894 MHz |
| GSM 900 | 880 MHz–915 MHz | 925 MHz–960 MHz |
| GSM 1800 | 1710 MHz–1785 MHz | 1805 MHz–1880 MHz |
| GSM 1900 | 1850 MHz–1910 MHz | 1930 MHz–1990 MHz |

4.3 Conducted RF Measurement

4.3.1 **Test Environment**

| Test instrument | R&S CMU200 |
|----------------------|---|
| Power supply | KEITHLEY 2306 |
| RF cable for testing | L08-C014-350 of DRAKA COMTEQ or Rosenberger |
| | Cable length: 29 cm |

- The compensation for different frequency bands relates to the cable and the test environment.
- The instrument compensation needs to be set according to the actual cable conditions.

4.3.2 Test Standards

Huawei modules meet 3GPP test standards. Each module passes strict tests at the factory and thus the quality of the modules is guaranteed.

4.4 Conducted Rx Sensitivity and Tx Power

4.4.1 Conducted Receive Sensitivity

The conducted receive sensitivity is a key parameter that indicates the receiver performance of MU709 module.

| Band | Test Value (Unit: dBm) | Note |
|---------|------------------------|----------------------|
| GSM 850 | -110.5 | BER Class II < 2.44% |
| GSM 900 | -109 | BER Class II < 2.44% |

Table 4-3 MU709s-2 conducted Rx sensitivity

| Band | Test Value (Unit: dBm) | Note |
|----------------------|------------------------|----------------------|
| GSM 1800 | -108.5 | BER Class II < 2.44% |
| GSM 1900 | -108.5 | BER Class II < 2.44% |
| WCDMA Band 1 Main RX | -110 | BER < 0.1% |
| WCDMA Band 8 Main RX | -111.5 | BER < 0.1% |

 Table 4-4
 MU709s-6 conducted Rx sensitivity

| Band | Test Value (Unit: dBm) | Note |
|----------------------|------------------------|----------------------|
| GSM 850 | -110.5 | BER Class II < 2.44% |
| GSM 900 | -109 | BER Class II < 2.44% |
| GSM 1800 | -108.5 | BER Class II < 2.44% |
| GSM 1900 | -108.5 | BER Class II < 2.44% |
| WCDMA Band 1 Main RX | -110 | BER < 0.1% |
| WCDMA Band 2 Main RX | -110.5 | BER < 0.1% |
| WCDMA Band 5 Main RX | -111.5 | BER < 0.1% |

The test values are the average of some test samples.

4.4.2 Conducted Transmit Power

The conducted transmit power is another indicator that measures the performance of MU709. The conducted transmit power refers to the maximum power that the module tested at the antenna pad can transmit. According to the 3GPP protocol, the required transmit power varies with the power class.

Table 4-5 and Table 4-6 list the required ranges of the conducted transmit power of MU709 module.

| Band | | Typical Value (Unit: dBm) | Note (Unit: dB) | |
|------------------------|----------------|---------------------------|-----------------|--|
| GSM 850 GMSK(1Tx Slot) | | 32.5 | ±1.5 | |
| | 8PSK(1Tx Slot) | 27 | ±2 | |
| GSM 900 GMSK(1Tx Slot) | | 32.5 | ±1.5 | |
| | 8PSK(1Tx Slot) | 27 | ±2 | |
| GSM 1800 | GMSK(1Tx Slot) | 29.5 | ±1.5 | |

Table 4-5 MU709s-2 conducted Tx power

| Band | | Typical Value (Unit: dBm) | Note (Unit: dB) |
|--------------|----------------|---------------------------|-----------------|
| | 8PSK(1Tx Slot) | 26 | ±2 |
| GSM 1900 | GMSK(1Tx Slot) | 29.5 | ±1.5 |
| | 8PSK(1Tx Slot) | 26 | ±2 |
| WCDMA Band 1 | | 23.2 | ±1 |
| WCDMA Band 8 | | 23.2 | -1.5/+1 |

Table 4-6 MU709s-6 conducted Tx power

| Band | | Typical Value (Unit: dBm) | Note (Unit: dB) |
|------------------------|----------------|---------------------------|-----------------|
| GSM 850 GMSK(1Tx Slot) | | 32.5 | ±1.5 |
| | 8PSK(1Tx Slot) | 27 | ±2 |
| GSM 900 | GMSK(1Tx Slot) | 32.5 | ±1.5 |
| | 8PSK(1Tx Slot) | 27 | ±2 |
| GSM 1800 | GMSK(1Tx Slot) | 29.5 | ±1.5 |
| | 8PSK(1Tx Slot) | 26 | ±2 |
| GSM 1900 | GMSK(1Tx Slot) | 29.5 | ±1.5 |
| | 8PSK(1Tx Slot) | 26 | ±2 |
| WCDMA Band 1 | | 23.2 | ±1 |
| WCDMA Band 2 | | 23.2 | ±1 |
| WCDMA Band 5 | | 23.4 | -1.5/+1 |

4.5 Antenna Design Requirements

4.5.1 Antenna Design Indicators

Antenna Efficiency

Antenna efficiency is the ratio of the input power to the radiated or received power of an antenna. The radiated power of an antenna is always lower than the input power due to the following antenna losses: return loss, material loss, and coupling loss. The efficiency of an antenna relates to its electrical dimensions. To be specific, the antenna efficiency increases with the electrical dimensions. In addition, the transmission line from the antenna port of MU709 to the antenna is also part of the antenna. The line loss increases with the line length and the frequency. It is recommended that the line loss is as low as possible.

The following antenna efficiency (free space) is recommended for MU709 to ensure high radio performance of the module:

- Efficiency of the primary antenna: ≥ 40% (below 960 MHz); ≥ 50% (over 1710 MHz)
- Efficiency of the diversity antenna: ≥ half of the efficiency of the primary antenna in receiving band

In addition, the efficiency should be tested with the transmission line.

S11(VSWR) and S21

S11 indicates the degree to which the input impedance of an antenna matches the reference impedance (50 Ω). S11 shows the resonance feature and impedance bandwidth of an antenna. Voltage Standing Wave Ratio (VSWR) is another expression of S11. S11 relates to the antenna efficiency. S11 can be measured with a vector analyzer.

The following S11 values are recommended for the antenna of the module:

- S11 of the primary antenna ≤ –6 dB
- S11 of the diversity antenna ≤ -6 dB

In addition, S11 is less important than the efficiency, and S11 has weak correlation to wireless performance.

S21 indicates the isolation between two antennas.

Isolation

For a wireless device with multiple antennas, the power of different antennas is coupled with each other. Antenna isolation is used to measure the power coupling. The power radiated by an antenna might be received by an adjacent antenna, which decreases the antenna radiation efficiency and affects the running of other devices. To avoid this problem, evaluate the antenna isolation as sufficiently as possible at the early stage of antenna design.

Antenna isolation depends on the following factors:

- Distance between antennas
- Antenna type
- Antenna direction

The primary antenna must be placed as near as possible to the module to minimize the line length. The diversity antenna needs to be installed perpendicularly to the primary antenna. The diversity antenna can be placed farther away from the module. Antenna isolation can be measured with a two-port vector network analyzer.

The following antenna isolation is recommended for the antennas:

- Isolation between the primary and diversity antennas $\leq -12 \text{ dB}$
- Isolation between the primary (diversity) antenna and the Wi-Fi antenna ≤ –15 dB

Polarization

The polarization of an antenna is the orientation of the electric field vector that rotates with time in the direction of maximum radiation.

The linear polarization is recommended for the antenna of MU709.

Radiation Pattern

The radiation pattern of an antenna reflects the radiation features of the antenna in the remote field region. The radiation pattern of an antenna commonly describes the power or field strength of the radiated electromagnetic waves in various directions from the antenna. The power or field strength varies with the angular coordinates (θ and ϕ), but is independent of the radial coordinates.

The radiation pattern of half wave dipole antennas is omnidirectional in the horizontal plane, and the incident waves of base stations are often in the horizontal plane. For this reason, the receiving performance is optimal.

The following radiation patterns are recommended for the antenna of MU709. **Primary/diversity antenna: omnidirectional**

In addition, the diversity antenna's pattern should be complementary with the primary antenna's pattern.

Envelope Correlation Coefficient

ECC is short for Envelope Correlation Coefficient. It is the cross-correlation value of the complex patterns of the master and diversity antenna. It indicates how similar the magnitude and the phase patterns of the two antennas are. If two antennas have no similarity, the ECC should be zero. Actually, the less ECC, the better diversity performance.

The following ECC is recommended for MU709 LGA module.

- ECC \leq 0.5 (working frequency below 0.96 GHz)
- ECC \leq 0.3 (working frequency above 1.4 GHz)

Gain and Directivity

The radiation pattern of an antenna represents the field strength of the radiated electromagnetic waves in all directions, but not the power density that the antenna radiates in the specific direction. The directivity of an antenna, however, measures the power density that the antenna radiates.

Gain, as another important parameter of antennas, correlates closely to the directivity. The gain of an antenna takes both the directivity and the efficiency of the antenna into account. The appropriate antenna gain prolongs the service life of relevant batteries.

The following antenna gain is recommended for MU709. Gain of the primary/diversity antenna \leq 2.5 dBi

- The antenna consists of the antenna body and the relevant RF transmission line. Take the RF transmission line into account when measuring any of the preceding antenna indicators.
- Huawei cooperates with various famous antenna suppliers who are able to make suggestions on antenna design, for example, Amphenol, Skycross, etc.

4.5.2 Interference

Besides the antenna performance, the interference on the user board also affects the radio performance (especially the TIS) of the module. To guarantee high performance of the module, the interference sources on the user board must be properly controlled.

On the user board, there are various interference sources, such as the LCD, CPU, audio circuits, and power supply. All the interference sources emit interference signals that affect the normal operation of the module. For example, the module sensitivity can be decreased due to interference signals. Therefore, during the design, you need to consider how to reduce the effects of interference sources on the module. You can take the following measures: Use an LCD with optimized performance; shield the LCD interference signals; shield the signal cable of the board; or design filter circuits.

Huawei is able to make technical suggestions on radio performance improvement of the module.

4.5.3 Antenna Requirements

The antenna for MU709 module must fulfill the following requirements:

| GSM/WCDMA Antenn | a Requirements |
|---------------------------------|---|
| Frequency range | Depending on frequency band(s) provided by the network operator, the customer must use the most suitable antenna for that/those band(s) |
| Bandwidth of primary antenna | 70 MHz in GSM 850 80 MHz in GSM 900 170 MHz in GSM 1800 140 MHz in GSM 1900 80 MHz in WCDMA Band 8 250 MHz in WCDMA Band 1 |
| Bandwidth of secondary antenna | 35 MHz in WCDMA Band 8 60 MHz in WCDMA Band 1 |
| Gain | ≤ 2.5 dBi |
| Impedance | 50 Ω |
| VSWR absolute max | ≤ 3:1 |
| VSWR recommended | ≤ 2:1 |

 Table 4-7
 MU709s-2 module antenna requirements

E.

| GSM/WCDMA Antenn | a Requirements |
|---------------------------------|--|
| Frequency range | Depending on frequency band(s) provided by the network operator, the customer must use the most suitable antenna for that/those band(s) |
| Bandwidth of primary antenna | 70 MHz in GSM 850 80 MHz in GSM 900 170 MHz in GSM 1800 140 MHz in GSM 1900 70 MHZ in WCDMA Band 5 140 MHz in WCDMA Band 2 250 MHz in WCDMA Band 1 |
| Bandwidth of secondary antenna | 25 MHz in WCDMA Band 5 60 MHz in WCDMA Band 2 60 MHz in WCDMA Band 1 |
| Gain | ≤ 2.5 dBi |
| Impedance | 50 Ω |
| VSWR absolute max | ≤ 3:1 |
| VSWR recommended | ≤ 2:1 |

Table 4-8 MU709s-6 module antenna requirements

5 Electrical and Reliability Features

5.1 About This Chapter

This chapter describes the electrical and reliability features in the MU709 module, including:

- Absolute Ratings
- Operating and Storage Temperatures
- Power Supply Features
- Reliability Features
- EMC and ESD Features

5.2 Absolute Ratings

Table 5-1 lists the absolute ratings for the MU709 module. Using the MU709 module beyond these conditions may result in permanent damage to the module.

Table 5-1 Absolute ratings

| Symbol | Specification | Min. | Max. | Unit |
|--------|------------------------|------|------|------|
| VBAT | External power voltage | -0.3 | 4.5 | V |
| VI | Digital input voltage | -0.3 | 2.3 | V |

5.3 Operating and Storage Temperatures and Humidity

Table 5-2 lists the operating and storage temperatures for the MU709 module.

Table 5-2 Operating and storage temperatures

| Specification | Min. | Max. | Unit |
|-------------------------------------|------|------|------|
| Normal working temperature | -20 | +70 | °C |
| Extended temperature ^[1] | -40 | +85 | °C |
| Storage temperature | -40 | +85 | °C |
| Humidity | 5 | 95 | % |

[1]: When the MU709 module works in the range from -40° C to -20° C or $+70^{\circ}$ C to $+85^{\circ}$ C, **NOT** all their RF performances comply with 3GPP specifications.

5.4 Power Supply Features

5.4.1 Input Power Supply

Table 5-3 lists the requirements for input power of the MU709 module.

Table 5-3 Requirements for input power

| Parameter | Min. | Тур. | Max. | Ripple | Unit |
|-----------|------|------|------|--------|------|
| VBAT | 3.3 | 3.8 | 4.2 | 0.1 | V |

Figure 5-1 Power Supply During Burst Emission

The VBAT minimum value must be guaranteed during the burst (with 2.75 A Peak in GPRS or GSM mode).

Table 5-4 Requirements for input current

| Power | Peak (Maximum) | Normal (Maximum) |
|-------|----------------|------------------|
| VBAT | 2750 mA | 1100 mA |

5.4.2 **Power Consumption**

The power consumption in different scenarios are respectively listed in Table 5-5 to Table 5-9 .

The power consumption listed in this section is tested when the power supply is normal voltage (3.8 V) and all of Test values are measured at room temperature.

| Table 5-5 | Averaged powe | er off DC power | consumption |
|-----------|---------------|-----------------|-------------|
| | Averaged pow | | consumption |

| Description | Test Value (Unit: μA) | Notes/Configuration |
|-------------|-----------------------|---|
| | Typical | |
| Power off | 30 | Normal voltage (3.8 V) is ON while power on event is not triggered. |

| Table 5-6 | Averaged standby DC power consumption |
|-----------|---------------------------------------|
|-----------|---------------------------------------|

| Descrip | tion | Bands | Test Value (Unit: mA) | Notes/Configuration |
|---------|------------|------------|-----------------------|---|
| | | | Typical | |
| Sleep | HSPA/WCDMA | UMTS bands | 2.7 | Module is powered up DRX cycle=7 (1.28s) Module is registered on the network. USB is in suspend. |
| | GPRS/EDGE | GSM bands | 2.4 | Module is powered up MFRMS=5 (1.175s) Module is registered on the network. USB is in suspend. |
| Idle | HSPA/WCDMA | UMTS bands | 50 | Module is powered up DRX cycle=7 (1.28s) Module is registered on the network, no data is transmitted USB is in active. |
| | GPRS/EDGE | GSM bands | 50 | Module is powered up MFRMS=5 (1.175s) Module is registered on the network. no data is transmitted USB is in active. |

Table 5-7Averaged Data Transmission DC power consumption of MU709s-2(HSPA/WCDMA)

| Description | Band | Test Value (Unit: mA) | Notes/Configuration |

5.6 EMC and ESD Features

The following are the EMC design comments:

- Attention should be paid to static control in the manufacture, assembly, packaging, handling and storage process to reduce electrostatic damage to HUAWEI module.
- RSE (Radiated Spurious Emission) may exceed the limit defined by EN301489 if the antenna port is protected by TVS (Transient Voltage Suppressor), which is resolved by making some adjustment on RF match circuit.
- TVS should be added on the USB port for ESD protection, and the parasitic capacitance of TVS on D+/D- signal should be less than 2 pF. Common-mode inductor should be added in parallel on D+/D- signal.
- TVS should be added on the USIM interface for ESD protection. The parasitic capacitance of TVS on USIM signal should be less than 10 pF;
- Resistors in parallel and a 10nF capacitance should be added on RESIN_N and POWER_ON_OFF signal to avoid shaking, and the distance between the capacitor and the related pins should be less than 100 mil.
- A TVS should be added to the module power supply. It is recommended that the TVS's Clamping Voltage (V_{CL}) be smaller than 12 V and Peak Pulse Power (P_{PP}) at least 100 W.
- PCB routing should be V-type rather than T-type for TVS (Transient Voltage Suppressor).
- An integrated ground plane is necessary for EMC design.

The following are the requirements of ESD environment control:

- The electrostatic discharge protected area (EPA) must have an ESD floor whose surface resistance and system resistance are greater than 1 x $10^4 \Omega$ while less than 1 x $10^9 \Omega$.
- The EPA must have a sound ground system without loose ground wires, and the ground resistance must be less than 4 Ω .
- The workbench for handling ESD sensitive components must be equipped with common ground points, the wrist strap jack, and ESD pad. The resistance between the jack and common ground point must be less than 4 Ω . The surface resistance and system resistance of the ESD pad must be less than 1 x 10⁹ Ω .
- The EPA must use the ESD two-circuit wrist strap, and the wrist strap must be connected to the dedicated jack. The crocodile clip must not be connected to the ground.
- The ESD sensitive components, the processing equipment, test equipment, tools, and devices must be connected to the ground properly. The indexes are as follows:
 - Hard ground resistance < 4 Ω
 - 1 x $10^5 \Omega \le$ Soft ground resistance < 1 x $10^9 \Omega$
 - 1 x 10⁵ Ω ≤ ICT fixture soft ground resistance < 1 x 10¹¹ Ω
 - The electronic screwdriver and electronic soldering iron can be easily oxidized. Their ground resistance must be less than 20 Ω .
- The parts of the equipment, devices, and tools that touch the ESD sensitive components and moving parts that are close to the ESD sensitive components must be made of ESD materials and have sound ground connection. The parts

that are not made of ESD materials must be handled with ESD treatment, such as painting the ESD coating or ionization treatment (check that the friction voltage is less than 100 V).

- Key parts in the production equipment (parts that touch the ESD sensitive components or parts that are within 30 cm away from the ESD sensitive components), including the conveyor belt, conveyor chain, guide wheel, and SMT nozzle, must all be made of ESD materials and be connected to the ground properly (check that the friction voltage is less than 100 V).
- Engineers that touch IC chips, boards, modules, and other ESD sensitive components and assemblies must wear ESD wrist straps, ESD gloves, or ESD finger cots properly. Engineers that sit when handling the components must all wear ESD wrist straps.
- Noticeable ESD warning signs must be attached to the packages and placement areas of ESD sensitive components and assemblies.
- Boards and IC chips must not be stacked randomly or be placed with other ESD components.
- Effective shielding measures must be taken on the ESD sensitive materials that are transported or stored outside the EPA.

HUAWEI MU709 module does not include any protection against overvoltage.

6.1 About This Chapter

This chapter describes the process design and mechanical specifications:

- Storage Requirement
- Moisture Sensitivity
- Dimensions and Interfaces
- Packaging
- Customer PCB Design
- Thermal Design Solution
- Assembly Processes
- Rework

6.2 Storage Requirement

The module must be stored and sealed properly in vacuum package under a temperature below 40°C and the relative humidity less than 90% in order to ensure the weldability within 12 months.

6.3 Moisture Sensitivity

- The moisture sensitivity is level 3.
- After unpacking, the module must be assembled within 168 hours under the environmental conditions that the temperature is lower than 30°C and the relative humidity is less than 60%. If the preceding conditions cannot be met, the module needs to be baked according to the parameters specified in Table 6-1.

| Table 6-1 | Baking parameters |
|-----------|--------------------------|
|-----------|--------------------------|

| Baking Temperature | Baking Condition | Baking Duration | Remarks |
|---------------------------|-------------------------|------------------------|---------|
| 125°C±5°C | Relative humidity ≤ 60% | 8 hours | - |

Moving, storing, and processing the product must comply with IPC/JEDEC J-STD-033.

6.4 Dimensions and Interfaces

Figure 6-1 shows the dimensions in details.

Figure 6-1 Dimensions (Unit: mm)

6.5 Packaging

HUAWEI LGA module uses five layers ESD pallet, anti-vibration foam and vacuum packing into cartons. The tray specification complies with Jedec_Tray_DGuide4-10D.

Figure 6-2 ESD pallet (unit: mm)

The following figure shows the packaging.

6.6 Customer PCB Design

6.6.1 PCB Surface Finish

The PCB surface finish recommended is Electroless Nickel Immersion Gold (ENIG). Organic Solderability Preservative (OSP) may also be used, ENIG preferred.

6.6.2 PCB Pad Design

To achieve assembly yields and solder joints of high reliability, it is recommended that the PCB pad size be designed as follows:

Figure 6-3 MU709 Footprint design (Unit: mm)

6.6.3 Solder Mask

NSMD is recommended. In addition, the solder mask of the NSMD (Non-solder Mask Defined) pad design is larger than the pad so the reliability of the solder joint can be improved.

The solder mask must be 100 μ m–150 μ m larger than the pad, that is, the single side of the solder mask must be 50 μ m–75 μ m larger than the pad. The specific size depends on the processing capability of the PCB manufacturer.

6.6.4 Requirements on PCB Layout

- To reduce deformation, a thickness of at least 1.0 mm is recommended.
- Other devices must be located more than 3 mm (5 mm recommended) away from the two parallel sides of the LGA module (rework requirement), and other sides with 0.6 mm. The minimum distance between the LGA module and the PCB edge is 0.3 mm.
- When the PCB layout is double sided, the module must be placed on the second side for assembly; so as to avoid module dropped from PCB or component (located in module) re-melding defects caused by uneven weight.

6.7 Thermal Design Solution

When the module works in the maximum power condition, the module has high power consumption (for details, see Power Consumption). To improve the module reliability and stability, focus on the thermal design of the device to speed up heat dissipation. For thermal characteristics of the MU709 module, you can refer to Operating and Storage Temperatures.

Take the following heat dissipation measures:

- The copper size on the PCB should be 70 mm x 70 mm or larger.
- All copper ground layers of the PCB must be connected to each other through via-holes.
- Increase the quantity of the PCB ground planes.
- The ground planes should be as continuous as possible.
- If a fan is deployed, place the module at the cold air inlet.
- Use heat sink, thermal conductive material and product enclosure to enhance the heat dissipation of the module.
 - Use anodized heat sink on the shielding case or the customer PCB on bottom side for optimal heat dissipation. The recommended heat sink dimensions are 70 mm x 70 mm x1 mm or larger.
 - The material of the heat sink should adopt the higher thermal conductivity metallic materials, e.g. Al or Cu.
 - The recommended thermal conductivity of the thermal conductive material is 1.0 W/m-k or higher (recommended manufacturers: Laird or Bergquist).
 - Conductive material should obey the following rule: after the heat sink is fastened to the shielding case, the compression amount of the thermal conductive material accounts for 15% to 30% of the thermal conductive material size.

- Conductive material should be as thin as possible.
- The recommended material of the enclosure is metallic materials, especially you can add pin fin on the enclosure surface.
- If the heat sink is installed above the shielding case, you should attach the thermal conductive material between the shielding case and the heat sink; if the heat sink is installed below the bottom side of the customer PCB, you should attach the thermal conductive material between the customer PCB and the heat sink, as shown in Figure 6-5 and Figure 6-6. Preferably, we recommend the heat sink be installed below the bottom side of the customer PCB.
- Use more pin fins to enlarge heat dissipation area.

Figure 6-5 Adding heat sink to the module for optimal heat dissipation

Figure 6-6 Adding enclosure to enhance the heat dissipation of the module

6.8 Assembly Processes

6.8.1 Overview

- Tray modules are required at SMT lines, because LGA modules are placed on ESD pallets.
- Reflow ovens with at least seven temperature zones are recommended.
- Use reflow ovens or rework stations for soldering, because LGA modules have large solder pads and cannot be soldered manually.

6.8.2 Stencil Design

It is recommended that the stencil for the LGA module be 0.15 mm in thickness. For the stencil design, see the following figure:

The stencil design has been qualified for HUAWEI motherboard assembly, customers can adjust the parameters by their motherboard design and process situation to assure LGA soldering quality and no defect.

6.8.3 **Reflow Profile**

The LGA module must be reflowed on the top side of customer's development board. For the soldering temperature of the LGA module, see the following figure.

Figure 6-8 Reflow profile

Table 6-2 Reflow parameters

| Temperature Zone | Time | Key Parameter |
|------------------------------|-----------------------|---|
| Preheat zone (40°C–165°C) | - | Heating rate: 0.5°C/s–2°C/s |
| Soak zone (165°C–217°C) | (t1–t2): 60s–100s | - |
| Reflow zone (> 217°C) | (t3–t4): 45s–80s | Peak reflow temperature: 235°C–245°C |
| Cooling zone | Cooling rate: 2°C/s ≤ | Slope ≤ 5°C/s |

6.9 Rework

6.9.1 Process of Rework

6.9.2 Preparations of Rework

- Remove barrier or devices that can't stand high temperature before rework.
- If the device to be reworked is beyond the storage period, bake the device according to Table 6-1.

6.9.3 Removing of the Module

The solder is molten and reflowed through heating during the module removing process. The heating rate must be quick but controllable in order to melt all the solder joints simultaneously. Pay attention to protect the module, PCB, neighboring devices, and their solder joints against heating or mechanical damages.

- The LGA module has many solder pads and the pads are large. Therefore, common soldering irons and heat guns cannot be used in the rework. Rework must be done using either infrared heating rework stations or hot air rework stations. Infrared heating rework stations are preferred, because they can heat components without touching them. In addition, infrared heating rework stations produce less solder debris and less impact on modules, while hot air rework stations may cause shift of other components not to be reworked.
- You must not reuse the module after disassembly from PCB during rework.
- It is proposed that a special clamp is used to remove the module.

Figure 6-9 Equipment used for rework

Remove the module by a special clamp

Hot air rework station

6.9.4 Welding Area Treatment

- Step 1 Remove the old solder by using a soldering iron and solder braid that can wet the solder.
- Step 2 Clean the pad and remove the flux residuals.
- Step 3 Solder pre-filling: Before the module is installed on a board, apply some solder paste to the pad of the module by using the rework fixture and stencil or apply some solder paste to the pad on the PCB by using a rework stencil.

It is recommended that a fixture and a mini-stencil be made to apply the solder paste in the rework.

6.9.5 Module Installation

Install the module precisely on the motherboard and ensure the right installation direction of the module and the reliability of the electrical connection with the PCB. It is recommended that the module be preheated in order to ensure that the temperature of all parts to be soldered is uniform during the reflow process. The solder quickly reflows upon heating so the parts are soldered reliably. The solder joints undergo proper reflow duration at a preset temperature to form a favorable Inter-metallic Compound (IMC).

- It is recommended that a special clamp be used to pick the module when the module is installed on the pad after applied with some solder.
- A special rework device must be used for the rework.

6.9.6 Specifications of Rework

Temperature parameter of rework: for either the removing or welding of the module, the heating rate during the rework must be equal to or smaller than 3°C/s, and the peak temperature between 240°C–250°C. The following parameters are recommended during the rework.

Figure 6-10 Temperature graph of rework

7.1 About This Chapter

This chapter gives a general description of certifications of the MU709 module.

7.2 Certifications

Table 7-1 shows certifications of the MU709 module have been implemented. For more demands, please contact us for more details about this information.

| Certification | Model name | |
|---------------|--------------|--------------|
| | MU709s-2 | MU709s-6 |
| CE | \checkmark | \checkmark |
| RoHS | \checkmark | \checkmark |
| CCC | \checkmark | - |
| GCF | \checkmark | \checkmark |
| WEEE | \checkmark | \checkmark |
| FCC | - | \checkmark |
| PTCRB | - | \checkmark |
| Anetel | - | \checkmark |
| A-tick | - | \checkmark |
| NCC | \checkmark | - |

Table 7-1 Product Certifications

Read the safety information carefully to ensure the correct and safe use of your wireless device. Applicable safety information must be observed.

8.1 Interference

Power off your wireless device if using the device is prohibited. Do not use the wireless device when it causes danger or interference with electric devices.

8.2 Medical Device

- Power off your wireless device and follow the rules and regulations set forth by the hospitals and health care facilities.
- Some wireless devices may affect the performance of the hearing aids. For any such problems, consult your service provider.
- Pacemaker manufacturers recommend that a minimum distance of 15 cm be maintained between the wireless device and a pacemaker to prevent potential interference with the pacemaker. If you are using an electronic medical device, consult the doctor or device manufacturer to confirm whether the radio wave affects the operation of this device.

8.3 Area with Inflammables and Explosives

To prevent explosions and fires in areas that are stored with inflammable and explosive devices, power off your wireless device and observe the rules. Areas stored with inflammables and explosives include but are not limited to the following:

- Gas station
- Fuel depot (such as the bunk below the deck of a ship)
- Container/Vehicle for storing or transporting fuels or chemical products
- Area where the air contains chemical substances and particles (such as granule, dust, or metal powder)
- Area indicated with the "Explosives" sign

- Area indicated with the "Power off bi-direction wireless equipment" sign
- Area where you are generally suggested to stop the engine of a vehicle

8.4 Traffic Security

- Observe local laws and regulations while using the wireless device. To prevent accidents, do not use your wireless device while driving.
- RF signals may affect electronic systems of motor vehicles. For more information, consult the vehicle manufacturer.
- In a motor vehicle, do not place the wireless device over the air bag or in the air bag deployment area. Otherwise, the wireless device may hurt you owing to the strong force when the air bag inflates.

8.5 Airline Security

Observe the rules and regulations of airline companies. When boarding or approaching a plane, power off your wireless device. Otherwise, the radio signal of the wireless device may interfere with the plane control signals.

8.6 Safety of Children

Do not allow children to use the wireless device without guidance. Small and sharp components of the wireless device may cause danger to children or cause suffocation if children swallow the components.

8.7 Environment Protection

Observe the local regulations regarding the disposal of your packaging materials, used wireless device and accessories, and promote their recycling.

8.8 WEEE Approval

The wireless device is in compliance with the essential requirements and other relevant provisions of the Waste Electrical and Electronic Equipment Directive 2012/19/EU (WEEE Directive).

8.9 RoHS Approval

The wireless device is in compliance with the restriction of the use of certain hazardous substances in electrical and electronic equipment Directive 2011/65/EU (RoHS Directive).

8.10 Laws and Regulations Observance

Observe laws and regulations when using your wireless device. Respect the privacy and legal rights of the others.

8.11 Care and Maintenance

It is normal that your wireless device gets hot when you use or charge it. Before you clean or maintain the wireless device, stop all applications and power off the wireless device.

- Use your wireless device and accessories with care and in clean environment. Keep the wireless device from a fire or a lit cigarette.
- Protect your wireless device and accessories from water and vapour and keep them dry.
- Do not drop, throw or bend your wireless device.
- Clean your wireless device with a piece of damp and soft antistatic cloth. Do not use any chemical agents (such as alcohol and benzene), chemical detergent, or powder to clean it.
- Do not leave your wireless device and accessories in a place with a considerably low or high temperature.
- Use only accessories of the wireless device approved by the manufacture. Contact the authorized service center for any abnormity of the wireless device or accessories.
- Do not dismantle the wireless device or accessories. Otherwise, the wireless device and accessories are not covered by the warranty.
- The device should be installed and operated with a minimum distance of 20 cm between the radiator and your body.

8.12 Emergency Call

This wireless device functions through receiving and transmitting radio signals. Therefore, the connection cannot be guaranteed in all conditions. In an emergency, you should not rely solely on the wireless device for essential communications.

8.13 Regulatory Information

The following approvals and notices apply in specific regions as noted.

8.13.1 CE Approval (European Union)

The wireless device is approved to be used in the member states of the EU. The wireless device is in compliance with the essential requirements and other relevant provisions of the Radio and Telecommunications Terminal Equipment Directive 1999/5/EC (R&TTE Directive).

8.13.2 FCC Statement

Federal Communications Commission Notice (United States): Before a wireless device model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government-adopted requirement for safe exposure.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Warning: Changes or modifications made to this equipment not expressly approved by HUAWEI may void the FCC authorization to operate this equipment.

9 Appendix A Circuit of Typical Interface

10 Appendix B Acronyms and Abbreviations

| Acronym or Abbreviation | Expansion |
|-------------------------|---|
| 3GPP | Third Generation Partnership Project |
| 8PSK | 8 Phase Shift Keying |
| ADC | Analog To Digital Converter |
| AMPR | Additional Maximum Power Reduction |
| AP | Access Point |
| AUX | Auxiliary |
| BC | Band Class |
| BER | Bit Error Rate |
| BLER | Block Error Rate |
| BIOS | Basic Input Output System |
| CCC | China Compulsory Certification |
| CDMA | Code Division Multiple Access |
| CE | European Conformity |
| CMOS | Complementary Metal Oxide Semiconductor |
| CPU | Central Processing Unit |
| CS | Circuit Switched |
| DC | Direct Current |
| DCE | Data Communication Equipment |
| DL | Down Link |
| DMA | Direct Memory Access |

| Acronym or Abbreviation | Expansion |
|-------------------------|--|
| DTE | Data Terminal Equipment |
| DRX | Discontinuous Reception |
| DVK | Development Kit |
| ECC | Envelope Correlation Coefficient |
| EDGE | Enhanced Data Rate for GSM Evolution |
| EIA | Electronic Industries Association |
| EMC | Electromagnetic Compatibility |
| ENIG | Electroless Nickel Immersion Gold |
| EPA | Electrostatic Discharge Protected Area |
| ESD | Electrostatic Discharge |
| EU | European Union |
| EVDO | Evolution Data Optimized |
| FCC | Federal Communications Commission |
| FDD | Frequency Division Duplex |
| GMSK | Gaussian Minimum Shift Keying |
| GPIO | General Purpose I/O |
| GPRS | General Packet Radio Service |
| GPS | Global Positioning System |
| GSM | Global System for Mobile Communication |
| GLONASS/GNSS | Global Navigation Satellite System |
| HBM | Human Body Model |
| HSDPA | High Speed Downlink Packet Access |
| HSPA | Enhanced High Speed Packet Access |
| HSUPA | High Speed Up-link Packet Access |
| IC | Integrated Circuit |
| IMC | Inter Metallic Compound |
| IMT | International Mobile Telephony |
| ISO | International Standards Organization |
| JTAG | Joint Test Action Group |
| LCD | Liquid Crystal Display |

| Acronym or Abbreviation | Expansion |
|-------------------------|---|
| LCP | Liquid Crystal Polyester |
| LDO | Low Dropout Regulator |
| LED | Light Emitting Diode |
| LGA | Land Grid Array |
| LPF | Low Pass Filter |
| LTE | Long Term Evolution |
| MCP | Multi Chip Package |
| MCS | Modulation and Coding Scheme |
| MPR | Maximum Power Reduction |
| МО | Mobile Originated |
| MT | Mobile Terminated |
| NC | Not Connected |
| NTC | Negative Temperature Coefficient |
| NSMD | Non Solder Mask Defined |
| OC | Open Collector |
| PA | Power Amplifier |
| РВССН | Packet Broadcast Control Channel |
| PCB | Printed Circuit Board |
| PCL | Power Control Level |
| PCM | Pulse Code Modulation |
| PDU | Protocol Data Unit |
| PID | Product Identity |
| PMU | Power Management Unit |
| PS | Packet Switched |
| QPSK | Quadrature Phase Shift Keying |
| RF | Radio Frequency |
| RH | Relative Humidity |
| RHCP | Right Hand Circular Polarization |
| RoHS | Restriction of the Use of Certain Hazardous Substances |
| RSE | Radiated Spurious Emission |

| Acronym or Abbreviation | Expansion |
|-------------------------|--|
| RUIM | Removable User Identity Module |
| RX | Receive |
| SAW | Surface Acoustic Wave |
| SCI | Slot Cycle Index |
| SIMO | Single Input Multiple Output |
| SMS | Short Message Service |
| SMT | Surface Mounting Technology |
| TBD | To Be Determined |
| TDD | Time Division Duplex |
| TD-SCDMA | Time Division-Synchronous Code Division Multiple Access |
| TIS | Total Isotropic Sensitivity |
| TTFF | Time to First Fix |
| TVS | Transient Voltage Suppressor |
| ТХ | Transmit |
| UART | Universal Asynchronous Receiver Transmitter |
| UL | Up Link |
| UMTS | Universal Mobile Telecommunications System |
| USB | Universal Serial Bus |
| USIM | Universal Subscriber Identity Module |
| VID | Vendor Identity |
| VPP | Voltage Programming Power |
| VSWR | Voltage Standing Wave Ratio |
| WEEE | Waste Electrical and Electronic Equipment |
| WCDMA | Wideband Code Division Multiple Access |
| WWAN | Wireless Wide Area Network |
